

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

Claim 1 (Currently Amended): A method comprising:

receiving events at a prioritization engine from ~~[[a]]~~ one or more remote monitors, wherein the one or more remote monitors ~~obtain~~ obtains the events from interrogation of a plurality of medical devices implanted within ~~a~~ different patients, wherein the events include therapy events and diagnostic events, and wherein the prioritization engine and the one or more remote monitors are both external to the patients;

prioritizing, with the prioritization engine, the received events; and

presenting, with a user interface device, a list of the patients and a list of the events for each of the patients based on the prioritization.

Claim 2 (Cancelled).

Claim 3 (Original): The method of claim 1, wherein prioritizing events includes prioritizing the events based on a relative importance associated with the events.

Claim 4 (Original): The method of claim 1, further comprising invoking a special action in response to an event with a relative importance that exceeds a threshold.

Claim 5 (Original): The method of claim 4, wherein the special action comprises using a conspicuous text format when presenting data from the event.

Claim 6 (Currently Amended): The method of claim 5, wherein the conspicuous text format includes at least one of font, bold text, highlighted text, underlined text, and italicized text.

Claim 7 (Currently Amended): The method of claim 4, wherein the special action includes at least one of generating an alarm, notifying a clinician, and notifying a patient.

Claim 8 (Currently Amended): A method comprising:

interrogating, with [[a]] one or more remote monitors, a plurality of medical devices implanted in a different patients to obtain event data;

receiving, with a prioritization engine, the event data from the one or more remote monitors, wherein each of the events of the event data describes one of a therapy event and a diagnostic event, and wherein the prioritization engine is external to the patients; and

assigning, with the prioritization engine, a relative importance to each of the received events.

Claim 9 (Original): The method of claim 8, further comprising prioritizing events obtained from the interrogation based on the relative importance.

Claim 10 (Original): The method of claim 8, further comprising assigning the relative importance based on a set of rules.

Claim 11 (Currently Amended): The method of claim 8, further comprising presenting a prioritized list of the patients and the events for each of the patients based on the relative importance.

Claim 12 (Cancelled).

Claim 13 (Previously Presented): The method of claim 8, further comprising invoking a special action in response to an event with a relative importance that exceeds a threshold.

Claim 14 (Original): The method of claim 13, wherein the special action comprises using a conspicuous text format when presenting data from the event.

Claim 15 (Currently Amended): The method of claim 14, wherein the conspicuous text format includes at least one of bold text, highlighted text, underlined text, and italicized text.

Claim 16 (Currently Amended): The method of claim 13, wherein the special action includes at least one of generating an alarm, notifying a clinician, and notifying a patient.

Claim 17 (Currently Amended): A system comprising:

a prioritization engine to receive events from [[a]] one or more remote monitors, and to prioritize the received events, wherein the one or more remote monitors obtain ~~obtains~~ the events from interrogation of a plurality of medical devices implanted within a different patients, wherein the events include therapy events and diagnostic events, and wherein the prioritization engine and the one or more remote monitors are both external to the patients; and

a user interface device to present a list of the patients and a list of the events for each of the patients based on the prioritization.

Claim 18 (Original): The system of claim 17, further comprising a data management application that parses raw data from the implantable medical device, and populates fields of a database with event data.

Claim 19 (Original): The system of claim 18, wherein the event data comprises one of patient name, device type, date event data was parsed, and event type.

Claim 20 (Original): The system of claim 17, further comprising a database to store the prioritized events, wherein the user interface device includes a web browser to access the prioritized events via a network connection.

Claim 21 (Original): The system of claim 20, further comprising a derivation engine to generate additional events based on the stored events.

Claim 22 (Original): The system of claim 17, further comprising a rule engine to assign relative importance to the events based on rules from a rule database.

Claim 23 (Cancelled).

Claim 24 (Original): The system of claim 17, wherein the prioritization engine prioritizes the events based on a relative importance associated with the events.

Claim 25 (Original): The system of claim 17, further comprising a notification device to perform a special action in response to an event with relative importance that exceeds a threshold, wherein the relative importance is assigned to the event based on a level of priority for the event.

Claim 26 (Currently Amended): The system of claim 25, wherein the special action comprises ~~one of~~ using a conspicuous text format when presenting data from the event.

Claim 27 (Currently Amended): The system of claim 26, wherein the conspicuous text format includes at least one of bold text, highlighted text, underlined text, and italicized text.

Claim 28 (Currently Amended): The system of claim 25, wherein the special action includes at least one of generating an alarm, notifying a clinician, and notifying a patient.

Claim 29 (Currently Amended): A computer-readable medium comprising instructions for causing a programmable processor to:

receive events from a plurality of remote monitors, wherein each of the remote monitors obtains the events from interrogation of a medical device implanted within a different patient, wherein the events include therapy events and diagnostic events, and wherein the programmable processor and the remote monitors are both external to the patients;

prioritize the received events; and

present a list of the patients and a list of the events for each of the patients based on the prioritization.

Claim 30 (Cancelled).

Claim 31 (Original): The computer-readable medium of claim 29, wherein the instructions cause the processor to prioritize events based on a relative importance associated with the events.

Claim 32 (Original): The computer-readable medium of claim 29, wherein the instructions cause the processor to invoke a special action in response to an event with relative importance that exceeds a threshold.

Claim 33 (Currently Amended): A computer-readable medium comprising instructions for causing a programmable processor to:

interrogate a plurality of medical devices implanted in a different patients;
receive event data generated by the medical devices, wherein the event data describes one of a therapy event and a diagnostic event; and
assign a relative importance to each received event, wherein the programmable processor is external to the patients.

Claim 34 (Currently Amended): The computer-readable medium of claim 33, wherein the instructions cause the processor to prioritize the received events ~~obtained from interrogation~~ based on relative importance.

Claim 35 (Original): The computer-readable medium of claim 33, wherein the instructions cause the processor to assign the relative importance based on a set of rules.

Claim 36 (Currently Amended): The computer-readable medium of claim 33, wherein the instructions cause the processor to present a list of the patients and a list of the events for each of the patients based on the prioritization.

Claim 37 (Cancelled).

Claim 38 (Original): The computer-readable medium of claim 33, wherein the instructions cause the processor to invoke a special action in response to an event with a relative importance that exceeds a threshold, wherein the relative importance is assigned to the event based on a level of priority for the event.

Claim 39 (Currently Amended): A device comprising:

a prioritization engine to receive events from a plurality of remote monitors, and to prioritize the received events, wherein each of the remote monitors obtains the events from interrogation of a medical device implanted within a different patient, wherein the events include therapy events and diagnostic events, and wherein the prioritization engine and the remote monitors are both external to the patient; and

a database to store the prioritized events.

Claim 40 (Previously Presented): The device of claim 39, further comprising a data management application that parses raw data from the implantable medical device, and populates fields of the database with event data.

Claim 41 (Previously Presented): The device of claim 39, wherein the event data comprises one of patient name, device type, date event data was parsed, and event type.

Claim 42 (Previously Presented): The device of claim 39, further comprising a derivation engine to generate additional events based on the stored events.

Claim 43 (Previously Presented): The device of claim 39, further comprising a rule engine to assign relative importance to the events based on rules from a rule database, wherein the prioritization engine prioritizes the events based on the relative importance.

Claim 44 (Cancelled).
